

# Yasashiikuma (Perm.) Reg'd. Kennel Ear Taping Instructions

## Materials you should assemble

Moleskin – not MoleFOAM

A good pair of scissors

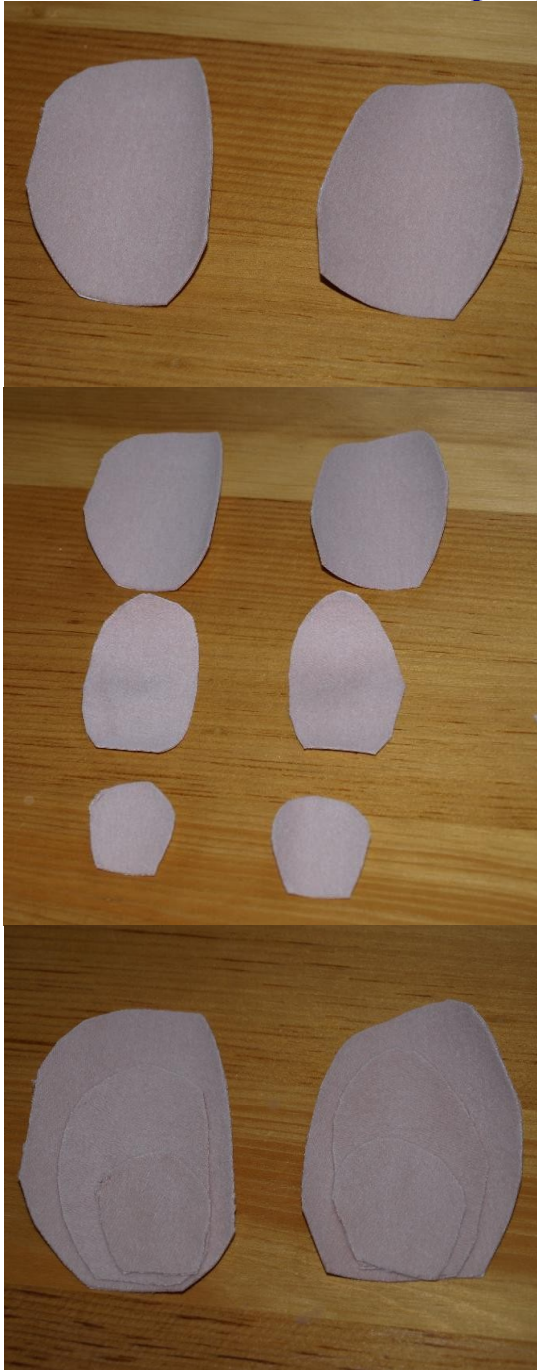

Waterproof adhesive tape in 1" and 1/2" widths

Treats for the puppy!

## Ear taping instructions

1. Cut a large piece of moleskin the size and shape of the puppy's ear.

2. Cut two more pieces for each ear, one approximately  $\frac{1}{4}$ " smaller all around and one slightly larger than a quarter. Make sure to round the bottom corners slightly

3. Peel and stick the medium and small sized pieces on top of the large piece as shown.

4. Get your victim puppy  
😊

5. Peel the backing off the  
large piece

6. Starting at the base apply  
the moleskin to the inside of  
the ear.

7. Rub the moleskin to ensure it is securely attached to the ear leather.

8. Apply the moleskin to the second ear.

9. Cut a strip of the 1" tape approximately 12" long.

10. Fold the ear vertically from the base to the tip.

11. Start winding the tape around the base of the ear, firmly but not tight enough to restrict blood flow or be painful to the puppy.

12. Stick the end of the tape to itself.

13. Repeat procedure for the other ear.

14. Using the ½” adhesive build a bridge taping the ears together, so that they are at approximately the correct ear set.

15. The correct ear set is a straight line from the nose through the eye to the top of the ear.

16. Give the puppy a treat for being such a good, patient baby.

If the tape becomes wet, or if there is a foul smell remove and replace the tape. If your puppy scratches at it excessively, your wrap may be too tight causing infection. If the taping lasts a week, remove it and give a few days rest before repeating the procedure if necessary.

One week later....success!
